**SAW FILTERS** SF315-T

#### FEATURES

• The SF315-T is a low - loss, economical surface-acoustic-wave (SAW) filter designed to provide front-end selectivity in 315.00MHz receivers.

## APPLICATIONS

Remote Control

Terminating				
Zs=50 Ω and matching network			<b>A</b>	
Terminating load impedance: ZL=50 $\Omega$ and matching network			<b>A</b>	
Holder Type: TO-39			Δ	Т
Package: Tube			Δ	U

▲ Standard \* Specifications Subject to Change Without Notice △ Optional: please specify required code when inquiring or ordering

- Electrostatic Sensitive Device. Observe precautions for handling!
   Typical test circuit is shown for TO-39 RF filters.
   Passband and reject bands are specified in reference to fc.
   All characteristics are specified over the operating temperature and typical

- aging for 10 years.

  5. Unless noted otherwise, all measurements are made with the filter installed
- in the specified test fixture. Note that insertion loss, bandwidth, and passband shape are dependent on the impedance matching component valuer and quality. Demonstration circuits are available for confirmation of device

- quality. Demonstration circuits are available for confirmation of device performance.

  6. One or more of the following U.S. Patents apply: 4,454,488; 4,616,197; and other pending.

  7. All equipment designs utilizing this product must be approved by the appropriate government agency prior to manufacture or sale.

  8. The design, manufacturing process, and specifications of this device are subject without notice.
- Subject will flotte.

  9. The turnover temperature, To, is the temperature of maximum (of turnover) frequency, fo. The nominal frequency at any case temperature, Tc, outside the operating temperature range may be calculated from: f=fo[1-FTC(To-Tc)2].
